

Field Studies in Marine Science

New Zealand has the world's 5th largest coastal exclusive economic zone. Our future is linked to the oceans through climate, trade, food supply and recreation use.

The University's marine laboratory at Leigh, one hour north of Auckland, is the ideal centre for an introduction to the physical and biological structure of the oceans, sea floor, coastlines and the biological communities that inhabit them.

Our Faculties understand the importance of internationalising education and preparing your students for a changing world.

Exploring New Zealand and the Pacific

Aotearoa-New Zealand is a small, democratic, island nation in the South Pacific.

Themes of early Maori and Pacific migration, colonisation, language, art, music, politics and contemporary society are explored in cross-disciplinary approaches which encourage a broad understanding of the region.

We develop programmes in association with your faculty, creating courses which extend and excite your students and meet the credit requirements of your university.

Customised Short Courses The University of Auckland

The Centre for Continuing Education designs and delivers customised short courses.

We provide transformative, high quality courses that provide international students with a unique opportunity to study at a world ranked university and experience the culture of a vibrant and exciting country.

We manage the course from start to finish – organising accommodation, coordinating teaching, field studies, cultural visits, social events and course evaluation at the conclusion of the programme.
